

energysoft

Energy under control
Smart wind farm

- **MONITOR**
Visualize the performance of all your assets at a glance, and be alerted in case of malfunction or production drop
- **MAINTAIN**
Reduce the downtime of your power plants thanks to the integrated maintenance module and the mobile application for service technicians
- **OPTIMIZE**
Maximize the availability and performance of your sites using our advanced analytics
- **CUSTOMIZE**
Modify your dashboards and charts, create your alarms and periodic reports

User-tailored views

Energysoft software is suitable for any type of wind farm

INVESTORS

Track actual performance of your power plant portfolio

MAINTAINERS

Access to the oversee of your portfolio, manage your interventions and create your own maintenance reports

ASSET MANAGER

Manage your assets, using KPIs, custom tables and reports

With Energysoft, turn your wind farm **smart**

A cloud solution for remote performance analysis

Energysoft monitors all your power stations thanks to its customizable dashboards and its ability to send you alarms on malfunctions.

The software offers advanced analysis, such as production modeling with business experts.

An Open solution with APIs

Energysoft plugs to the manufacturers APIs to retrieve the operating data of your portfolio, but also connect to national electricity distributors to take meter readings. In the other direction, our APIs based on the ODATA standard allow your reporting tools and more generally your information system to read, on Energysoft, data aggregated and standardized.

A multi-site, multi-manufacturer solution

Energysoft processes data from your plants send by on-site communication gateways. These devices send information regularly to our servers, which analyze, aggregate and archive it.

Data rendering and reporting :

- Customizable dashboards consisting of widgets (charts, tables ...) that you assemble according to your needs
- Customizable alerts sent by email, SMS or mobile notifications
- Reports generated and sent automatically

Mobile maintenance management

The integrated maintenance tool tracks information from failure detection to closure of the incident.

Using the mobile app, service technicians report live from the production site.
